Italian

Profile

I am a telecommunications engineer but I have always worked in the IT world.

Immediately after graduation I worked as a J2ME developer at the University of Rome TorVergata in European projects.

After this experience I worked at the Capodarco cooperative as co-administrator of the VoIP system for managing calls of the regional ReCup service.

Subsequently I worked as a full-stack developer at Blu Sistemi, developing web portals and hybrid mobile applications for gaming concessionaires.

At the same time I continued my interest in blockchain technology and cryptocurrencies and this led me to work, again as a developer for Eidoo, developing part of the new wallet and other systems and functions always linked to the world of cryptocurrencies and web3
